

PlaceCity Symposium

Placemaking as a Tool for Urban Regeneration

What is the potential of placemaking as a tool for urban regeneration? To what extent does it contribute towards a more caring and resilient urban future?

We will first reflect on different responses given by cities among the world **facing COVID-19**. We will continue exploring the possibilities and limitations we need to address through the experiences of different cities, to achieve a shift stand on **collaboration and placemaking**. Local placemaking projects – including **PlaceCity Vienna and Oslo** – will be showcased and contextualized with international placemakers, planners, civil servants, city administration, among others.

ONLINE:
